

Aurora Robotics: Aurora M1 Product Overview

Company Background

Aurora Robotics was founded in 2018 in Denver, Colorado, by a team of former industrial-automation engineers. The company designs and manufactures autonomous mobile robots for warehouse and fulfillment-center operations. Aurora Robotics currently employs approximately 140 people across its Denver headquarters and a secondary engineering office in Austin, Texas.

The Aurora M1 Robot

The Aurora M1 is Aurora Robotics' flagship warehouse picking robot, released in 2021. It is designed to autonomously navigate warehouse aisles, retrieve items from shelving units, and transport them to packing stations.

The Aurora M1 has a battery life of 10 hours under typical operating load and recharges fully in approximately 90 minutes using its included fast-charging dock. The robot has a maximum payload capacity of 25 kilograms and a top navigation speed of 1.8 meters per second.

Aurora M1 units use a combination of LIDAR, depth cameras, and ultrasonic proximity sensors for obstacle avoidance, and coordinate with a central fleet-management system called Aurora FleetOS to avoid collisions and optimize warehouse traffic flow.

Technical Specifications

Dimensions: 68 cm (length) x 52 cm (width) x 40 cm (height). Weight (unloaded): 48 kilograms. Maximum payload: 25 kilograms. Battery life: 10 hours continuous operation. Charge time: approximately 90 minutes. Top speed: 1.8 meters per second. Operating temperature range: 2 degrees Celsius to 40 degrees Celsius.

Pricing and Availability

The Aurora M1 is sold on a subscription basis to warehouse operators, starting at 1,450 US dollars per robot per month, which includes maintenance, software updates, and access to Aurora FleetOS. As of the most recent published company material, the Aurora M1 has been deployed in over 60 warehouse facilities across North America.

Safety and Compliance

The Aurora M1 is certified to ANSI/RIA R15.08 safety standards for industrial mobile robots. Each unit includes emergency stop buttons on all four sides of the chassis and an automatic slow-down zone that activates when a human worker is detected within 1.5 meters.

Customer Support

Aurora Robotics offers 24/7 customer support for enterprise customers, with a guaranteed on-site technician response time of 8 business hours for critical hardware failures. Software issues are typically resolved remotely through Aurora FleetOS diagnostics.
